PROFILE

Full stack developer with two years shipping production ERP, CRM, and e-commerce systems for a 7-engineer team, plus solo ownership of a live CRM and a freelance client platform end-to-end. Authored ~90% of the SDK for an open-source monitoring tool; designed a role-based access system spanning 5-6 roles and integrated three payment providers into production.

TECHNICAL SKILLS

- **Frontend:** React.js, Next.js, TypeScript, JavaScript, Redux, Zustand, TailwindCSS, ShadCN, Capacitor
- **Backend:** Node.js, Express.js, MongoDB, PostgreSQL, Prisma, Redis (Upstash), Socket.io, Firebase Cloud Messaging, Zod, REST API design
- **Auth & Payments:** JWT, OAuth, NextAuth.js, Better Auth, Razorpay, Stripe, Cashfree
- **Tools & Deployment:** Git/GitHub, Vercel, Render, Netlify, Postman, Figma, Jira, Notion

EXPERIENCE

Freelance Full Stack Developer — *Feb 2026 – Present*

Independent / Direct Client Engagement

- Sole developer on a full-stack community management platform covering resident records, certificate issuance, registration, and financial tracking — owned the project single-handedly from client requirements through production deployment, with no team support to fall back on.
- Built the system on Next.js, TypeScript, MongoDB, and Prisma; implemented JWT authentication to the client's specification and deployed to production on Vercel.

Full Stack Developer — *Aug 2025 – Feb 2026*

Willowy Infotech Pvt. Ltd. · Calicut, Kerala, India

- Shipped 10+ production ERP, CRM, and e-commerce platforms as the backend-focused developer on a 7-person engineering team (Next.js, Node.js, Prisma).
- Sole developer for a live CRM serving an educational institution — owned every feature, bug fix, and production incident myself; root-caused and fixed a timezone bug that was corrupting timestamps platform-wide.
- Built a two-sided marketplace connecting service providers and clients, including recurring subscription billing and a free-trial signup flow, from scratch; separately co-built a Professional Service Automation (PSA) platform with one other engineer.
- Designed and implemented a role-based access control system supporting 5-6 distinct user roles, and integrated three payment gateways (Razorpay, Stripe, Cashfree) and three authentication methods (JWT, OAuth, Better Auth) into production.

Web Developer Intern — *Aug 2024 – Aug 2025*

BridgeOn · Malappuram, Kerala, India

- Originated the idea for SCOPEO, a real-time server monitoring platform, and served as its primary backend engineer on a 4-person team — personally authoring roughly 90% of the monitoring SDK.
- Ran daily standups and task planning for the team as the project's technical lead.
- Built independent practice projects outside team scope, including a real-time social feed app with chat and notifications, to move from tutorial-level to production-level MERN proficiency.

PROJECTS

DURIO — Cross-Platform Productivity App — *Apr 2025 – Present*

Solo-built and shipped to both web and Android from one Next.js codebase.

durio.vercel.app · github.com/MohammedIrfan244/to-do-app

- Architected a modular, feature-first system on Next.js 15, Prisma, and MongoDB to support independent, scalable productivity modules.
- Built a single authentication layer working across web (NextAuth.js) and native Android (Google Sign-In) on one shared user model, then packaged the app as a native Android build with Capacitor wired to Firebase Cloud Messaging.

SCOPEO — Real-Time Monitoring & AI Error Analysis — *Feb 2025 – Apr 2025*

github.com/scopeo-tech/scopeo-monitor · github.com/scopeo-tech/scopeo-package

- Built a real-time monitoring dashboard with AI-powered error analysis (Next.js 15, WebSockets, NextAuth.js; Express, TypeScript, MongoDB, Redis, cron scheduling), plus the companion open-source Node.js SDK tracking uptime, latency, traffic, and system resources at millisecond-level resolution with minimal runtime overhead.

EDUCATION

B.Sc. Mathematics — University of Calicut, Kerala, India · 2024
